ceremony despite the fear the Washo may have had of her.

Since her death in the early 1940's, pine-nut dances have been less frequent. Only one woman among the Washo is reputed to know all the songs, although I suspect that several others are in possession of this knowledge but refuse to come forth and serve as leaders, in keeping with Washo reluctance to assume responsible roles.

After a number of years without a dance, the custom was revived in the early 1950's at Dresslerville. The dances were staged because previous crops had been poor and it was felt a dance would increase the harvest.

These dances, supervised by the woman who knew the songs, were not considered too successful because both Indian dances and white men's dances were conducted. Indian dances were held outside the community house while younger couples danced in the white manner inside. The prayers, bathing, and dreams played [535] a very minor role, although food was supplied. From the accounts these dances sounded extremely secular with an emphasis on the recreational aspects, particularly dancing. However, the consensus that the ceremonies were not successful because of the introduction [177] of white-style dancing suggests that the Indian dances still retain some of their former sacred character. It was agreed that a dance might be held today or in the future if the crops were poor. Here again the present economic situation of the Washo tends to limit these affairs to weekends. The impossibility of holding four-day dances, however, is not considered serious by most Washo. Several informants stoutly denied that there was any requirement that the dance last four days. They implied that those who insisted on this were [801] simply trying to make it sound more important (note that using the figure four makes something more important). Their accounts report that the dances might last from one or two days to a week during which time games were played, dances held, and the ritual described earlier carried out. However, there is no doubt that the dances were important to the success of the harvest and the well-being of the harvesters. One informant recalls that: "Sometimes them pine nuts was ripe before the dance. If we picked them then [before the dance], we took a bath every day before we started picking but we didn't have to do that after the dance."

The following incident illustrates the attitude most conservative Washo have toward the pinyon pine. D'Azevedo (personal communication) accompanied an elderly woman to her pine-nut allotment where she discovered that illegal Christmas-tree cutters had topped a number of trees, which she believed de- [782] stroyed their ability to bear. Her response was of sorrow rather than anger. She sat under her trees for a long time apologizing to her father, from whom she had inherited the plot, and to the spirits of the trees.

There seems to have been little ritual involved in other gathering activities, except for the dances to make the seeds grow mentioned in the element lists [182] (3621). This practice must have been occasional and relatively old, because it is no longer part of the memories of older informants.

if the introduced complex is similar to some aspects of the indigenous culture, or can be interpreted in the light of existing principles." The second is the cultural disintegration theory, which says that peoples experiencing cultural disintegration and degradation will readily accept new religions, especially those which promise the miraculous restoration of former conditions of life." So satisfactory have appeared the interpretations based on these postulates they have almost become truisms in ethnology. Although no one has assumed they explained everything, they have been employed almost exclusively, either because data for more detailed analysis were lacking or because the problem seemed adequately solved.

How do the facts of the diffusion of the peyote cult to the Washo-Paiute fit into these theories? Application of the cultural compatibility theory does not result in a satisfactory explanation. The following ceremonial elements in the aboriginal culture might be said to resemble those in the peyote complex: the Great Basin curing performance is a semisocial affair in which both sexes assist the shaman by singing and smoking; staff, rattle, feathers, and eagle-wingbone whistle are used; curing ceremonies last all night and have midnight intermissions; the Washo have a ceremonial number four and clockwise ceremonial direction; shamans have visions; Jimson weed is used for curing, visions, luck, prognostication, clairvoyance—"Roots are ground, soaked, and boiled, concoction being drunk."" Thus, peyotism and Washo-Paiute ceremonial usage have a number of elements in common.

However, if the cultural compatibility explanation is carried to its logical conclusion, one should list the ceremonial elements which differ from those in peyotism, for if similarities favor acceptance, differences should hinder it. Elements in aboriginal Washo-Paiute ceremonialism unlike those in peyotism are: an extremely simple curing ceremony in which only the shaman's personal songs are sung and a tubular pipe is smoked; no drum is used; the rattles are made of cocoons, rawhide, or deerhoofs instead of gourds; the staff is not passed around but is stuck in the ground; single feathers instead of a fan are used; the Northern Paiute ceremonial number is five, and the ceremonial direction counterclockwise; powers are received in visions during normal sleep, visions being of spirits, water babies, and animals, which represent the shaman's supernatural power; in curing, the shaman goes into a trance to allow his soul to pursue and return the lost soul of the sick person, or he removes stones, insects, blood, etc., from the patient by sucking.

When dissimilarities as well as similarities are considered, analysis becomes complicated by the necessity of evaluating the relative strength of the opposing factors. Furthermore, with regard to Washo-Paiute peyotism, the problem is more

---

" Radin, 1914, 7: "We have, then at the beginning, apparently the introduction of only one new element,—the peyote; with possibly a few Christian teachings. Everything else seems to be typically Winnebago, and in consonance with their shamanistic practices. On the whole, the extension of the Winnebago cultural background seems to have been so instantaneous that so far as the specific cultural traits of the Winnebago are concerned, there was no introduction of a new element." Shonle, 59: ". . . the underlying belief in the supernatural origin of visions is important among the factors contributing to the diffusion of Peyote and in a general way defines the area of its probable spread." Opler, 164: ". . . the reason for [the peyote cult's] slavish acceptance is not far to seek. The elements, or quite similar ones, were already present in Apache ceremonial usage." La Barre, 121 (also, 7, 117): "Conceivably it could spread until it embraced all Plains, Basin, and Woodlands groups whose earlier culture is sufficiently consonant with its concepts . . . it appears that the pre-peyote mescal bean cult prepared the way somewhat for the use of the narcotic cactus."

" Kroeber, 1925, 868–873, assumes that the Ghost Dance of 1870 spread to California, whereas that of 1890 diffused to the Plains, because "the native civilization of northern California appears to have suffered as great a disintegration by 1870 . . . as the average tribe of the central United States had undergone by 1890." See also Lowie, 1923, 188–200, and many others.
